

# High Voltage Enclosures

**Built to  
ESC C.O.T.S. Design  
or to  
AWE print**

ESC have developed a number of High Voltage enclosures to meet the vigorous requirements of AWE safety standards. These clear acrylic enclosures are designed for voltages up to 50KV.

# High Voltage Enclosures

We offer our high voltage enclosures in a variety of sizes (standard widths are 600mm, 800mm and 1000mm) and connector configurations (PET100, PET200, Reynolds, Lemo, HVBNC, etc).

As standard all enclosures have Castell key access which interlocks grounding relays to test pieces inside the enclosure. This interlock system is also used to drive a mains output feed for use on external power supplies.

The grounding relays are as standard Ross relays sized appropriately for the voltage level being grounded.
